LAWFUL EVIDENCE  
COLLECTING & CONTINUITY  
PLATFORM DEVELOPMENT

Manage an immutable chain of custody of the digital evidence for every crime under investigation.

Create the proper commitments per involved entity to handle the digital evidence accordingly.

Allow for usage of live-streaming data as evidence.

Provide investigators with online crawlers that will effectively detect deviant behaviour in online content.

Allow the usage of digital evidence through ease to export and re-use of digital evidence in the corresponding format and automated filling of the forms and documents.

Allow investigators tag possible malicious activities in data streams and receive notifications once alert criteria are met in processed data streams.

Allow victim organisations to monitor the progress of their digital investigation in real-time.

Allow investigators to publish anonymised data that can be used to find correlations and identify campaigns.

Provide investigators with offline tools that will assist them to collect multimedia evidence from media.

Provide an infrastructure that could be used to store all digital evidence and handle their use in a court.

Increase security of the platform by the integration of modules in a Trusted Execution Environment.

Allow citizens to report malicious online events and activities.
